

Font Creation for TELE

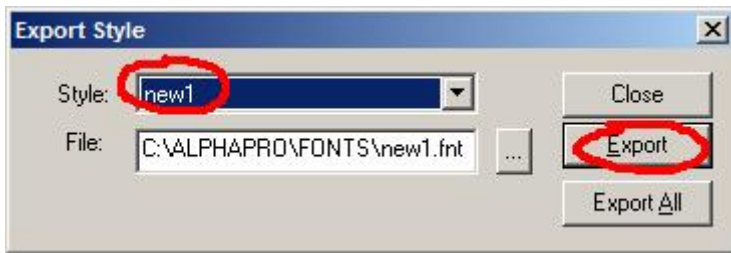

In order to create the new font for TELE you need to do the following.

- 1) Open Alpha Pro and type some text in the page area.
- 2) Select some part of the typed text and assign necessary font settings to it using Style settings panel at the right side of the program window.

- 3) Save settings of the new style using Save button. The name of the style should differ from existing ones (look at the picture above).

4) Export created style to following Character-> Export Style

If you need non Unicode style to be created please export to .fnt extension file. For creation of Unicode style .fnt2 extension should be used.

5) Move created fnt(fnt2) file to the folder c:\alphapro\fonts

If the procedure is processed correctly the new font (style) will be available in TELE.
